

DENDRO-SCOTT™ Ready-Made Tree Pit Liners

DENDRO-SCOTT™ Ready-Made Tree Pit Liners can prevent damage to pavements, garden slabs and other ornamental surface finishes, while also protecting underground services.

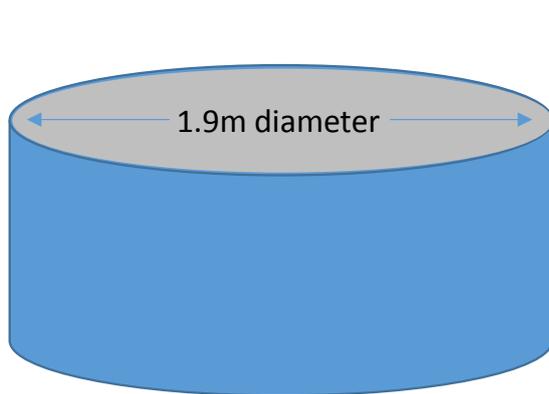

Installing **DENDRO-SCOTT™ Ready-Made Tree Pit Liners** is an excellent way to protect pavements, pathways, gardens, etc., from tree roots; diverting them downwards.

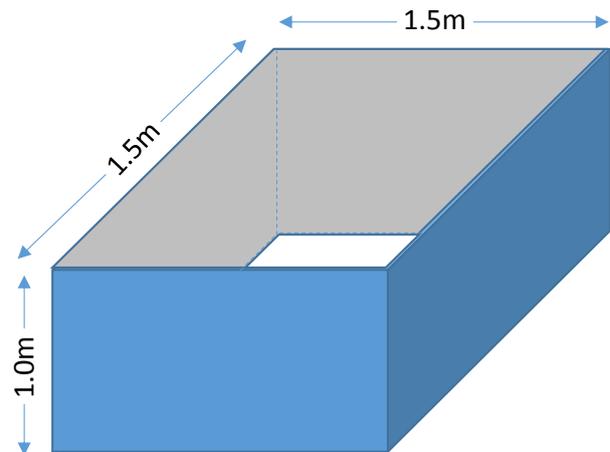

DENDRO-SCOTT™ Ready-Made Tree Pit Liners are quick and easy to install and save time on jointing the membrane in situ.

They are 1m deep and can be folded to create sizes up to 1.9m in diameter (*See diagrams below*).

If installed in a circular pit, the diameter measures 1.9m when fully extended, but the membrane can easily be folded, to create smaller sizes, as required.

If installed in a square pit, the membrane will measure 1.5m on each of the four sides. Naturally, it can be folded to create smaller sizes, or installed in a rectangular pit.

Contact us on **020 8254 5889** or at **sales@rootbarrier.com** for more details and to place an order.

We stock a wide range of **DENDRO-SCOTT™ Root Barriers**. Take a look at our website: www.rootbarrier.com.
